

RIVER PROJECT

PART 3: ORGANIZING YOUR RESEARCH AND FINDING IMAGES

STEP 1: Organizing your research

***It's time to turn your research into complete sentences that answer your question completely. You should have between 4 and 6 sentences per answer.**

***Your goal is to write each answer in an organized fluid way so the reader can easily understand the facts you are presenting them with.**

***You should not have to read the question first. The first sentence of your answer should be your question turned into a statement.**

***At the end of each answer you need to cite your source. Write down the website you found the information.**

STEP 2:

***Transfer your writing from notability into a google document in your social studies folder.**

STEP 3:

***It's time to organize and find your images using explain everything or voicethread (you will be recording your answers as you go through your slide show).**

***You are required to have a title slide, 2 slides per answer and a resource slide. This is a total of 12 slides!**

*** Your images must support and help explain your answers as you read them. For example: if your answer includes facts about the Ganges river pollution you should have an image of the polluted Ganges River on your slideshow to go along with it.**

STEP 4:

***Turn in your project via email or in your social studies folder.**

***I need the presentation and the written answers to your questions in order for you to receive credit for the full project**
